DF-1000 Core Chuck Assembly

Idler Roll Collar with Retractable Fingers

Torque-Activated "Quick-Change" Core Chuck

The DF-1000 "Quick-Change" Core Chuck Assembly is a revolutionary alternative to outdated, heavy, or labor intensive chucking systems. It replaces knock-in cones or wedges, manually operated chucks, and heavy through shafts.

The DF-1000 is a torque-activated chuck which engages automatically when the roll starts to turn. As more torque is applied, the chuck grips tighter—there is no need for operator adjustment. The chuck works the same way in either direction of rotation, and **does not require any air to function.**

The real beauty of the DF-1000 comes in its ease of use—just slide the assembly into the core. That's it. And when the roll has expired, all you have to do is slide a piece of core over the collar to retract the fingers, then slide the whole unit out of the roll. **No tools are needed to change rolls.**

If you have any questions about these or any other pressroom related items, please give us a call.

Quantity	Part Number	Description	Price Per Part
