Page Pack Clutch Top/ Mounting Bracket

If you are tired of pulling page packs out to work on the page pack clutch because it won't engage or disengage, here is the fix for the problem. There isn't much that goes wrong with the page pack clutch except for ink, paper dust and other debris packing between the page pack clutch slide and the page pack clutch top causing it to hang up. We have designed this top to shroud or enclose the slide, so that the ink and debris cannot get between it and the slide mechanism to jam it. We have also incorporated the air cylinder bracket into this new shrouded top, so the air cylinder is also protected from ink and debris. All there is to installing this new shrouded top is to remove the old top and air cylinder bracket from your page pack clutches. Mount the air cylinder and slip into the new top using the supplied hardware. After the air cylinder and slide are mounted into the top, set the assembly on top of the page pack clutch and attach it using the new hardware. Now your problems with the clutches are gone.

Quantity	Part Number	Description	Price Per Part
1-99	PPP-B140726-1M	Page Pack Clutch Top/Mounting	\$40.00
100-199		Replaces: B140726-1 Clutch Cover	\$35.00
200+		C96445-1 Cylinder Bracket	\$30.00
