One Piece RTP Fiber Core Chucks

Our one-piece fiber core chuck is now being used in many of the nations largest daily newspapers. By now most every newspaper pressroom has been contacted by their newsprint suppliers about changing over to fiber cores from the metal tipped cores. By changing over to our one-piece fiber core chuck this is easily done. The ability to use the surface sensing, or commentator method of pasting will not be affected by the use of our chucks. Nearly every newspaper using our chucks have reported that their paster averages have improved over metal tipped cores. Another advantage of our chucks is that they are nearly indestructible. We are not aware of ever receiving an order to replace one of our fiber core chucks because of wear. One of the nicest advantages of our chuck is that it is one piece and has no moving parts to wear out like many other core chucks.

Because many of our customers have been contacting us about the pricing to convert their reels over to the use of fiber cores, we are sending this product flyer to let you know about our special pricing. The following chart will show the break down of pricing based on quantities ordered. If you feel that you have a special need or modification for your particular type press, just contact us and we will make the necessary modifications to our chuck to satisfy your needs. We currently have our chucks in use on Goss and TKS presses but we are sure that we can make them for any type reel. Please give us a call if you have any questions regarding this or any other pressroom related item.
